

Genomyx H.E.A.T. STACK

Genomyx is proud to introduce its newest revolutionary product, a scientifically sound, truly advanced fat loss formula.

The recent trend in fat burner/thermogenic supplements has been to add numerous high dose central nervous system stimulants leading users to believe the product isn't working unless they're tweaked to the point of being uncomfortable.

Genomyx prefers a more scientific approach to fat loss by including more progressive ingredients designed at achieving the optimal ratio of norepinephrine (NE) to epinephrine while providing a significant dopamine boost and suppression of appetite. This dopamine boost not only affects mood (as dopamine levels decrease during dieting), but it also antagonizes the negative central effects of too much NE.

By combining years of metabolic research with volumes of user feedback, HEAT blows the doors off all the other products in its class.

Not only will HEAT strip fat off at an alarming rate, it also offers a variety of general health benefits. Boasting antioxidant, anti-inflammatory and blood pressure regulating effects, HEAT is the real deal and should be regarded as a staple in any fat loss program from this day forward.

Ingredient Overview

Bergenin

Increases norepinephrine's fat burning ability, opposes fat storing effects of insulin, antioxidant, liver protector, improves GI health.

Alpha Yohimbine (Rauwolscine)

Increases lipolysis through norepinephrine, alpha-2 antagonist, better receptor binding and fat burning ability than regular yohimbine, suppresses appetite, elevates dopamine and serotonin, vasodilator.

Raspberry Ketones

Enhances fat loss through activation of the TRPV1 receptor, mood elevator, positively modulates norepinephrine and hormone sensitive lipase (HSL), reduces hepatic and visceral fat, prevents fat gain, pain reducer.

Piperine

Inhibits CYP liver enzymes and P-Glycoproteins, antioxidant, mood elevator, MAO inhibitor, enhances fat loss through TRPV1 modulation, anti-inflammatory, supports healthy blood pressure, regulates TNF-alpha, neuroprotective, pain reducer.

Capsaicin

Increases channel expression of TRPV1, increases lipolysis through norepinephrine, activates AMPK, upregulates adiponectin, prevents new fat cells from forming, increases rate of fat burning at rest, helps prevent fat re-gain when fat is lost, pain reducer.

Green Coffee Bean Extract (standardized for chlorogenic and caffeic acids)

Reduces body weight and visceral fat, reduces triglycerides and homocysteine, vasodilates through nitric oxide modulation, elevates adiponectin and decreases inflammatory cytokines.

Hordenine

Works synergistically with Bergenin to increase lipolysis through norepinephrine modulation, elevates dopamine.

Tyramine

Norepinephrine modulation, elevates dopamine, vasodilator, activates the TAAR1 receptor, increases adenylyl cyclase, aids in nutrient partitioning.

Evodiamine

Elevates epinephrine and norepinephrine, anti-inflammatory, UCP1 activator, PPARgamma modulator, improves insulin signaling, pain reducer.

Losing body fat isn't just about working hard; it's about working smart. HEAT delivers the most advanced fat loss ingredients on the planet to ensure you reach new levels of leanness in record time. By optimizing the body's fat burning machinery while suppressing appetite and enhancing mood, you have no choice but to take your physique to a new level.
